## SBTS supported SM configurations roadmap

## Cell set concept

**SRAN 17.x onwards**

SBTS Configuration „Cell Set” approach:

- Cell sets defined on sub-baseband module level are combined as independent building blocks to build an SBTS configuration
- System module – Radio Module connection topology is auto detected. Commissioning rules, Baseband allocation and data routing are calculated based on detected topology.
- **LTE** cell sets to be supported in SBTS
- New **SRAN cell sets** for shared operation (LTE-WCDMA, LTE-GSM, GSM-WCDMA) and dedicated RAT operation for GSM and WCDMA are defined.
- **LTE and SRAN** cell sets can be flexibly combined to build target configuration.

7

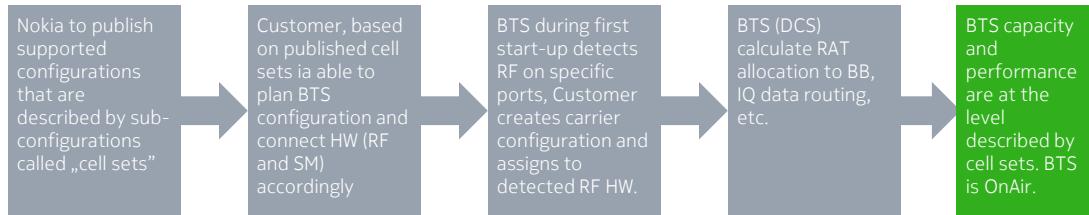

RA23500-V-19

© Nokia 2019

**NOKIA**

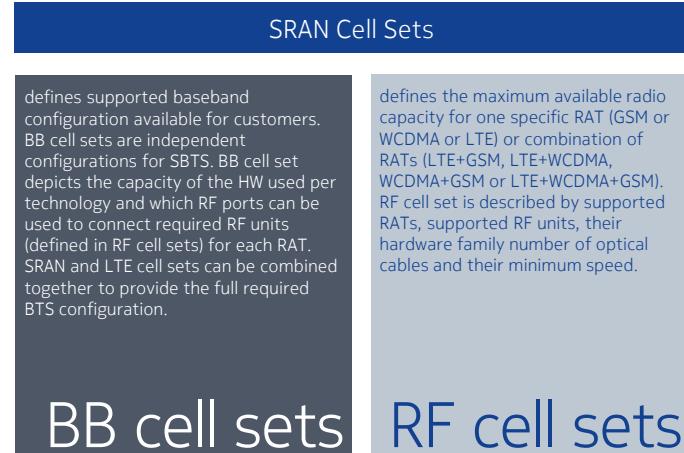

## Why do we need cell sets

What configurations are supported?

- Cell sets is a way to describe supported configurations towards customer
- Customer plans and dimensions configurations based on the cell sets provided by Nokia
- Cell sets are described on sub-baseband level and can be combined together to achieve full configuration.
- There is no direct indication about particular cell sets in the SW code
- SW has to provide capacity and performance at least as it is described by the cell sets

## SRAN cell sets SBTS

## SBTS configurations

### LTE and SRAN cell sets

## Cell set idea

Combination of LTE & SRAN cell sets to build target configuration

## SRAN profiles vs SRAN cell set concept with sample spectrum

800	900	1800	2100	2600
<ul style="list-style-type: none"> <li>- 2xFRMA</li> <li>- 1xFRMC</li> <li>- 3xFRMB</li> </ul>	<ul style="list-style-type: none"> <li>- 2xFXDB GSM</li> <li>- 2xFXDB 2T2R@LTE-GSM</li> <li>- 2xFXDB 2T4R@LTE-GSM</li> <li>- 3xFHDB2T2R@LTE-GSM</li> <li>- 2xFXDB 2T4R@LTE-GSM</li> </ul>	<ul style="list-style-type: none"> <li>- 1xFXED 2T2R@LTE</li> <li>- 2xFXED 4T4R@LTE</li> <li>- 3xFHED 2T2R@LTE</li> <li>- 3xFHED 4T4R@LTE</li> </ul>	<ul style="list-style-type: none"> <li>- 1xFRGU</li> <li>- 3xFRGY</li> </ul>	<ul style="list-style-type: none"> <li>- 2xFRHA</li> <li>- 1xFRHC</li> <li>- 3xFRHB</li> <li>- 3xFRHG</li> </ul>

### SRAN16:

BTS profiles – predefined BTS configuration:

- BTS level configuration definition
- HW
- Cabling
- BB allocation
- Cell amount
- Antenna Configuration type

$$3 \times 5 \times 4 \times 2 \times 4 = 480 \text{ profiles}$$

### SRAN17:

Cell sets – description of building blocks:

- LTE cell sets:
  - Pure LTE configurations from LTE SW to be supported in SRAN 17
  - Part of SRAN17 parity with LTE
- SRAN cell sets:
  - GSM, WCDMA, RAT shared building blocks (LTE-GSM, WCDMA- GSM, LTE-WCDMA)

$$3+4+4 = 11 \text{ LTE cell sets}$$

$$5+2 = 7 \text{ SRAN cell sets}$$

## SBTS 19 System Modules for supported configurations FSMF

SBTS 19 SM hardware

Single logical SBTS

13

Nokia Internal Use  
RA23500-V-19

© Nokia 2019

**NOKIA**

SRAN 19 supported SBTS configurations

Flexi Multiradio 10 configurations

- SRAN 19 BB capacity
  - Support of single FSMF configurations
  - The same RAT/BB allocation rules as in SRAN16.X
  - 36TRX option for GSM
- Coverage of existing profiles in SRAN 19
  - Each existing single FSMF profile are covered by combination of SRAN and LTE cell sets as of SRAN 19

## SRAN Baseband Capabilities

SBTS support for GSM

Example:

System Module Rel.3	Capacity Extension Submodule	GSM capacity
FSMF	-	24 TRX
FSMF	-	36TRX

SBTS support for GSM 36 TRX

## SRAN Baseband Capabilities

SBTS support for WCDMA

Example:

System Module Rel.3	Capacity Extension Submodule	Number of Subunits
FSMF	-	5.5
FSMF	FBBA/C	11.5
FSMF	2xFBBA/C	17.5

- ❑ For details check Dimensioning WCDMA RAN: Flexi BTS Baseband **DN981084**

There is no one way to describe WCDMA capacity in SBTS (as in WCDMA)

WCDMA capacity depends on many factors like

- ❑ Common Control Channel (CCCH) dimensioning with 1-4 Local Cell Groups
- ❑ 2-Way/4-Way RX Diversity
- ❑ cell range
- ❑ Rel.99 vs. HSDPA vs. HSUPA capacity allocation
- ❑ Parallel Interference Cancellation (PIC)
- ❑ DC-HSDPA and DB-HSDPA

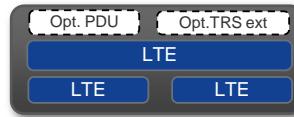

16   ❑ Local Cell Grouping

RA23500-V-19

© Nokia 2019

## SRAN Baseband Capabilities

SBTS support for LTE

Example:

System Module Rel.3	Capacity Extension Submodule	LTE BB allocation
FSMF	-	1x BCS
FSMF	FBBC	2xBCS or 1.5xBCS+0.5xBCS or 1xECS
FSMF	2xFBBC	3xBCS or 1xBCS+1.5xBCS+0.5xBCS or 1xECS+1xBCS

### Basic cell set (BCS)

- up to 6x10MHz LTE 2x2 MIMO in FSMF or FBBC
- up to 3x10MHz LTE 4TX/4RX 4x2 DL MIMO in TM4 in FSMF or FBBC
- up to 3x20MHz LTE 2x2 MIMO in FSMF or FBBC

### Extended cell set (ECS)

- FSMF+FBBA/C** is required for the 3x20MHz LTE with 4TX/4RX 4X4 DL MIMO capability

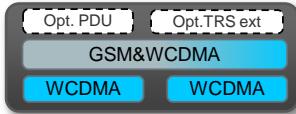

### 0.5 Basic cell set

- up to 3x10MHz LTE 2x2 MIMO in FSMF or FBBC - supported on SBTS only; it's only used together with 1xBCS to form 1.5xBCS AND in the combination 0.5xBCS+1.5xBCS

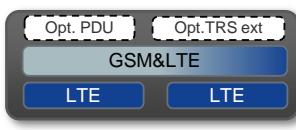

### 1.5 Basic cell set

- Is a combination of 1xBCS+0.5xBCS which can be configured on a RF set and which requires the allocation on one BB card plus half of another BB card (FSMF or FBBC) which hosts another 0.5xBCS. This will result in a 0.5xBCS+1.5xBCS BB cell set deployed on two BB cards

## Flexi Multiradio 10 BTS: System Module Sharing 2-RAT modes

System Module Rel.3	Capacity Extension Submodule	WCDMA BB: No. of Subunits	GSM BB
FSMF	-	3.5	24 TRX
FSMF	FBBA/C	9.5	24 TRX
FSMF	2xFBBA/C	15.5	24 TRX
FSMF	2xFBBA/C	14.5	36 TRX

System Module Rel.3	Capacity Extension Submodule	LTE BB	GSM BB
FSMF	-	1xRCS	24 TRX
FSMF	FBBC	1xRCS + 1xBCS	24 TRX
FSMF	2xFBBC	1xRCS + 2x BCS or 1xRCS+1.5xBCS+0.5xBCS	24 TRX
FSMF	2xFBBC	1xRCS + 1xECS	24 TRX

### Reduced cell set (RCS)

- up to 3x10MHz LTE 2x2 MIMO with CoMP in FSMF
- up to 4x10MHz LTE 2x2 MIMO without CoMP in FSMF

BCS=basic cell set, ECS=extended cell set, RCS=reduced cell set

### Inband NB-IoT cells

- up to 3 x 5/10/15/20 MHz FDD LTE 2T2R cells hosting inband NB-IoT cells and possibly with CAT-M enabled, per FSMF or FBBC

### Standalone NB-IoT cells

- up to 6x (5/10MHz 2T2R or NB-IoT standalone) cells, or,
- up to 2x 15/20MHz 2T2R + 2x (5/10MHz 2T2R or NB-IoT standalone) cells
- per FSMF or FBBC © Nokia 2019

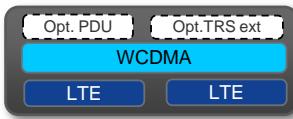

## Flexi Multiradio 10 BTS: System Module Sharing 2-RAT modes

System Module Rel.3	Capacity Extension Submodule	WCDMA BB: No. of Subunits	LTE BB
FSMF	2xFBBC	5.5	1x ECS

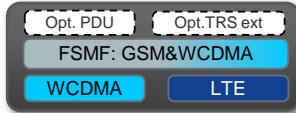

System Module Rel.3	Capacity Extension Submodule	WCDMA BB: No. of Subunits	LTE BB
FSMF	2xFBBA/C	11.5	1x BCS

System Module Rel.3	Capacity Extension Submodule	WCDMA BB: No. of Subunits	LTE BB
FSMF	2xFBBA/C	5.5	1.5+0.5 x BCS
FSMF	2xFBBA/C	5.5	2xBCS or 1xECS

**Flexi Multiradio 10 BTS: System Module Sharing 3-RAT modes**

System Module Rel.3	Capacity Extension Submodule	WCDMA BB: No. of Subunits	LTE BB	GSM BB
FSMF	2xFBBA/C	11.5	1x RCS	24 TRX

System Module Rel.3	Capacity Extension Submodule	WCDMA BB: No. of Subunits	LTE BB	GSM BB
FSMF	2xFBBA/C	9.5	1x BCS	24 TRX
FSMF	2xFBBA/C	8.5	1x BCS	36 TRX

System Module Rel.3	Capacity Extension Submodule	WCDMA BB: No. of Subunits	LTE BB	GSM BB
FSMF	2xFBBA/C	3.5	2 x BCS	24 TRX
FSMF	2xFBBA/C	2.5	2 x BCS	36 TRX

## Support of FSMF + FSMF with SRAN configurations (SR001498)

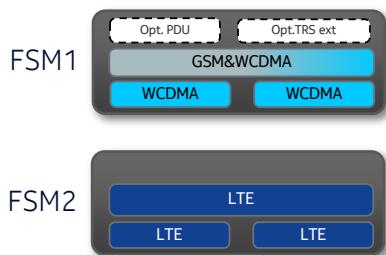

Inheritance from SBTS17A MP1

System Module Rel.3	Capacity Extension Submodule	WCDMA BB: No. of Subunits	LTE BB	GSM BB
2xFSMF	4xFBBA/C	15.5	3 x BCS	24 TRX
2xFSMF	4xFBBA/C	14.5	3 x BCS	36 TRX
2xFSMF	4xFBBA/C	15.5	1 x BCS + 1 x ECS	24 TRX
2xFSMF	4xFBBA/C	14.5	1 x BCS + 1 x ECS	36 TRX

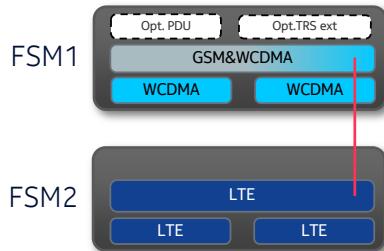

BCS=basic cell set, ECS=extended cell set, RCS=reduced cell set

## Support of FSMF + FSMF with SRAN configurations FSMF numbering

- The two FMSFs are numbered as:
  - **FSM1** - the one having the termination point of transport link
  - **FSM2** - no transport termination.
- By default, FSM1 plays the "primary core" role and FSM2 is the "secondary core".

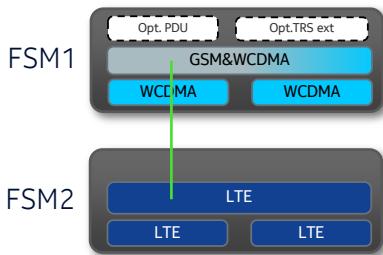

## Support of FSMF + FSMF with SRAN configurations SRIoT interconnection

- The FSMFs are inter-connected via one mandatory optical SRIoT link (between the SRIoT interface ports), used i.e. for
  - supporting RP1/RP2 and low latency data interconnection;
  - NTP (RTC, timestamp in logs)

## Support of FSMF + FSMF with SRAN configurations

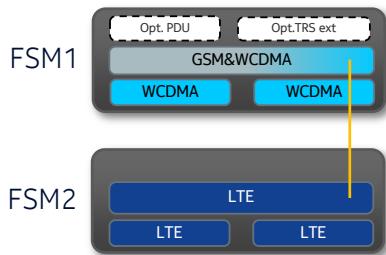

### OBSAI interconnection

- Optical OBSAI link (between RF/EXT ports), is mandatory for IQ data routing if the RMs connected to the FSM2 are used for LTE-GSM or LTE-WCDMA RAN sharing;
- The OBSAI link, when present, may use the RF/EXT ports of the FSMF (1-3 or 6)
- Any RF set\* can be combined with 2xFSMF BB cell set, by taking care that there are enough available ports for RF connections
- the inter-FSMF OBSAI link introduces additional capacity limitations for the GSM and WCDMA RFs connected to the secondary core - details are in the SBTS supported configurations excel file

\*3RAT RF cell sets are not supported in FSMF+FSMF configuration due to SW limitations

## Support of FSMF + FSMF with SRAN configurations Synchronization link

One synchronization link is required, which can be:

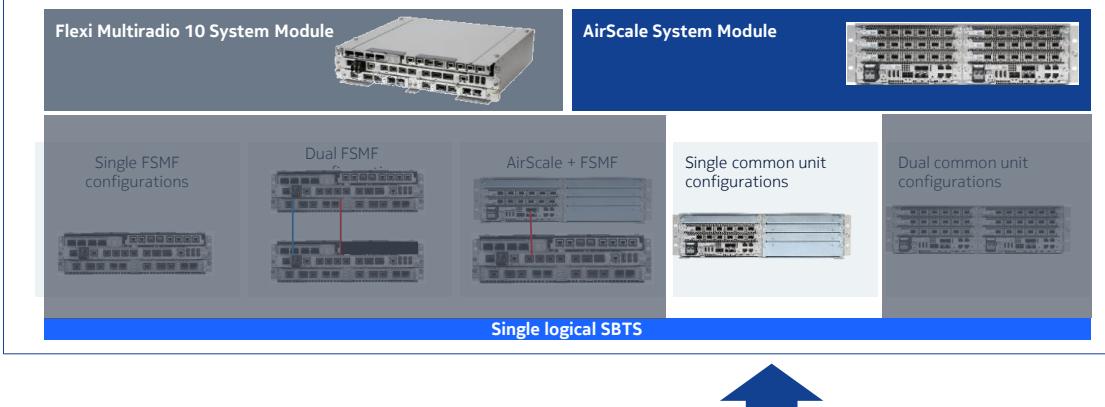

- HDMI (connected to Sync-Out HDMI port of FSMF1, Sync-In HDMI port of FSMF2)
- Optical

The choice relies on the following rules:

- when IQ data routing is required, thus optical OBSAI link is present, the synchronization can be done on the same optical fiber or, optionally, HDMI link can be used;
- when IQ data routing is not required, either HDMI cable or optical fiber can be used.

**NOKIA**

**AirScale BB dimensioning**

SRAN 19 Rel

SBTS follows dedicated  
LTE BB dimensioning:  
- Basic Cell Set  
- Extended Cell Set  
- XL Cell Set  
- Packed Cell Set  
- Dual-Packed Cell Set  
- NB-IoT dimensioning  
rules

**LTE**

SRAN WCDMA BB  
dimensioning calculated  
based on available #SU  
(similar as FSMF)

**WCDMA**

GSM dimensioning  
presented in #TRXs

**GSM**

## Nokia AirScale System Module

Baseband dimensioning rules

### GSM

- Up to 24 TRXs  $\frac{1}{4}$  ABIA
- Up to 36 TRXs  $\frac{1}{2}$  ABIA

### WCDMA

- Up to 24 cells per SM
- Up to 4 Local Cell Groups per SM
- ABIA = 8 subunits
- Min LCG capacity: 4 subunits ( $\frac{1}{2}$  ABIA)
- Max LCG capacity: 24 subunits (3 ABIA)

### FDD-LTE

- BB allocation granularity  $\frac{1}{2}$  ABIA
- FDD-LTE maximum capacity for AirScale HW platform presented in the upcoming slides

**Single ABIA card handles up to 2 RATs**

## Nokia AirScale System Module

GSM Baseband Capacity dimensioning rules

GSM is a complementary RAT for AirScale product offering mainly for SRAN site solutions

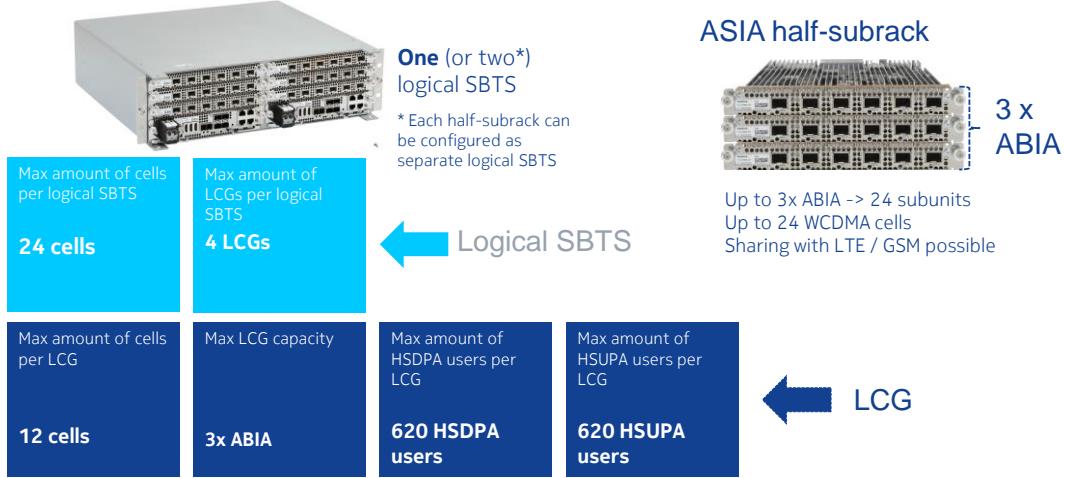

GSM RAT SW use BB resources as follows:

GSM BB is allocated to  $\frac{1}{4}$  or  $\frac{1}{2}$  ABIA

- 24 TRX GSM capacity with  $\frac{1}{4}$  ABIA
- 36 TRX capacity with  $\frac{1}{2}$  ABIA

## Nokia AirScale System Module

### WCDMA Baseband Capacity dimensioning rules

## Nokia AirScale System Module

WCDMA Baseband Capacity dimensioning rules

**ABIA card BB capacity = 8 Rel.4 subunits**

From WCDMA BB capacity dimensioning point of view Rel.4 subunit is equal to Rel.3 subunit (it provides same users' capacity i.e # 96 Rel.99 CE / HSPA users)

- Minimum LCG capacity is **4 subunits** (half ABIA)
- Maximum LCG capacity is **24 subunits** (3 x ABIA)
- Note: Subunits allocation to LCG is done with **2 subunits step**

Exemplary picture 2x ABIA  
, WCDMA: LCG 1 (4 subunits), LCG 2  
(12 subunits)

## Nokia AirScale System Module WCDMA Baseband Capacity

Nokia AirScale System Module supports System Module sharing (SRAN) functionality -> Single BB card can be shared between **two RATs**.

### 1) WCDMA – GSM card sharing case:

6 subunits available for WCDMA.  
GSM supports up to 24 TRXs

Note that WCDMA LCG can have resources also in another BB cards e.g. :

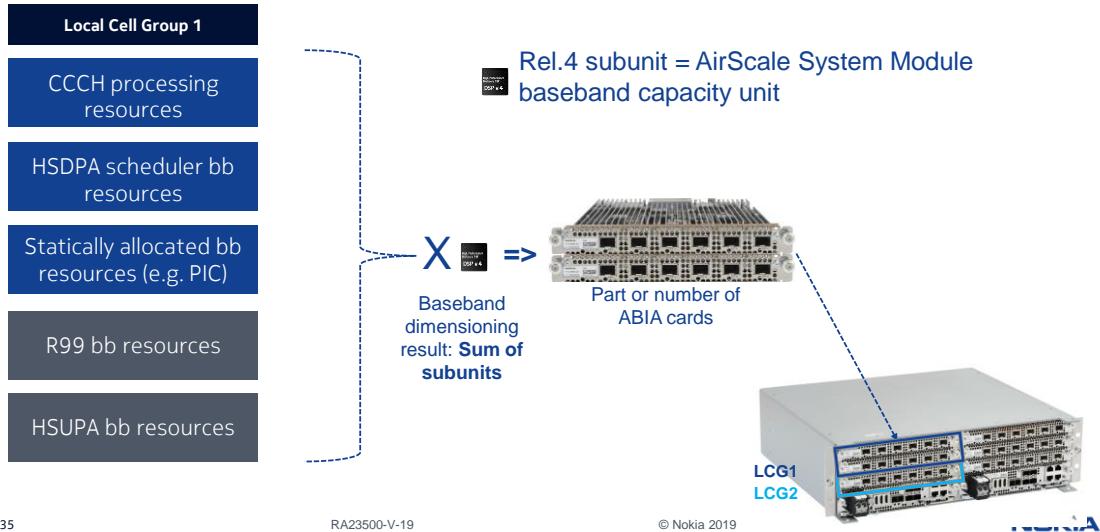

Exemplary picture LTE and WCDMA (12 subunits)

### 2) WCDMA – LTE card sharing case:

4 subunits for WCDMA.  
Remaining half ABIA for LTE allocation

## Fundamentals of WCDMA Baseband dimensioning

35

RA23500-V-19

© Nokia 2019

## Nokia AirScale System Module WCDMA Baseband Capacity

Single Rel.4 subunit allows to allocate:

- 96 Rel.99 CE or
- Up to 80 HSUPA users (FDPCH) / 56 HSUPA users (non-FDPCH) or
- HSUPA throughput up to 35Mbps\* or
- 1 PIC pool (Interference Cancellation unit) providing IC for 6 cells at the same time or
- Optional CCCH processing (one CCCH pool = 0,5 subunit / two CCCH pools = 1 subunit) – if needed.

HSDPA schedulers resources automatically allocate **1,625 subunit** from each LCG baseband capacity.

Each LCG has 3x HSDPA schedulers, each scheduler is capable to support up to **240 HSDPA users** but totally max **620 HSDPA** users are supported per LCG.

HSUPA scheduler supports up to **620 HSUPA** users per LCG.

Single LCG covers up to 12 cells.

\* 3x HSUPA 16QAM users (11Mbps) + 1x QPSK user (2Mbps)

## Nokia AirScale System Module WCDMA Baseband Capacity

Nokia AirScale System Module does not require CCCH Processing Set license for single Basic Configuration i.e. (3 cells / 20 km cell range / 2 way RxDiv / 4 signatures or 6 cells /10 km cell range / 2 way Rx Div / 4 signatures).

If more cells or higher cell range / Rx Div / # signatures are used then some of CCCH Processing Set LKs and baseband resources might be needed.

**Single LCG covers baseband resources for 3 CCCH pools** (e.g. 9 cells/20km/2way RxDiv /4 signatures).  
If more resources are required then additional CCCH pools need to be allocated with 0,5 subunit granularity.

### No need to allocate extra baseband for most of typical configurations:

- up to 9 cells/20km/2way RxDiv/ 4 signatures
- up to 12 cells/10km/ 2 way Rx Div / 4 signatures.

Note: Configurations mentioned above might require certain amount of CCCH Processing Sets LKs

## HSUPA scheduler capacity

HSUPA scheduler is **LCG specific** and supports **up to 12 cells**.

HSUPA scheduler supports **620 HSUPA users**, however maximum amount of HSPA users might be limited by available baseband (-> amount of LCG subunits)

HSUPA baseband allocation is done with HSUPA Resource Steps

Single HSUPA Resource Step corresponds to 0,125 subunit (->1 subunit consists of 8 HSUPA Resource Steps)

Available HSUPA Resource Steps are dynamically allocated based on traffic need (# HSUPA users and current L1 throughput).

To avoid "ping–pong" effect (effect in reserving and freeing HSUPA resource steps for/from R99 traffic) 0,125 su is not available for HSUPA scheduler on top of R99 consumption.

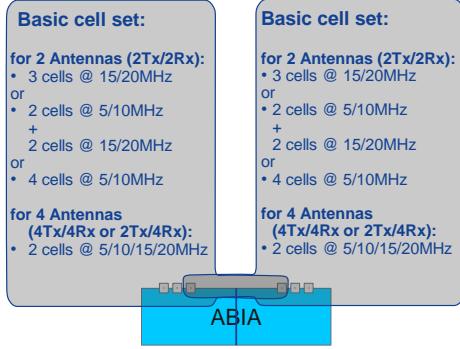

## HSUPA Interference Cancellation

- Cells from the same frequency layer (LCG) should be mapped to the same PIC pool unit
- One PIC pool unit consumes one subunit capacity
- One PIC pool supports up to 6 cells – interference cancellation is performed in all 6 cells at the same time.

## LTE Cell set mapping to AirScale System Module

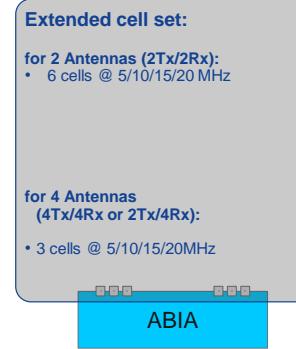

### Up to two basic cell sets per module:

- both cell sets share 6 ports
- With this feature one cell set can utilize max 4 ports, leaving 2 ports left for the other

### One extended cell set per module:

- up to 6 ports can be used
- configurations in extended cell set are mainly defined to allow ULCoMP and SuperCell between cells

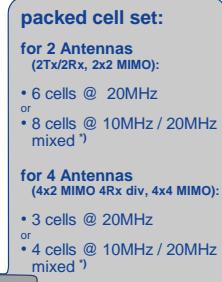

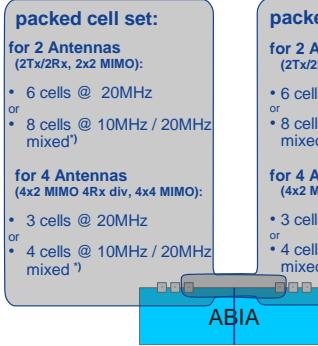

## LTE Cell set mapping to AirScale System Module

### Feature LTE2733 Baseband pooling needed

Up to two packed cell sets

per ABIA module:

- both cell sets share 6 ports
- With this feature one cell set can utilize max 4 ports, leaving 2 ports left for the other

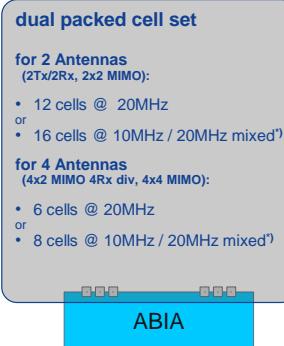

### One dual packed cell set per ABIA module:

- up to 6 ports can be used
- Contains 2 baseband pools, to provide sufficient capacity for multi-carrier and chaining configurations
- UL CoMP and SuperCell possible inside each BB pool

### Note about Cell numbers:

- 15 MHz instead of 20 MHz is supported as well
  - 5 MHz instead of 10 MHz is supported as well
  - for cases with 2 Antennas, 1.4 MHz or 3 MHz cells instead of 10MHz cell are supported as well
- <sup>1)</sup> In case of mixture of 10MHz and 20MHz cells, max 50% of the cells can be 20MHz

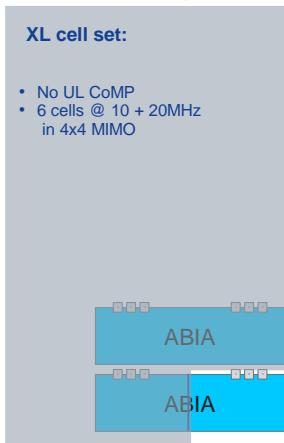

## LTE Cell set mapping to AirScale System Module

1,5 ABIA usage per cell set

Baseband pooling disabled

**XL cell set:**

- No UL CoMP
- 6 cells @ 10 + 20MHz in 4x4 MIMO

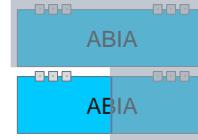

Baseband pooling enabled

**Triple packed cell set:****for 2 Antennas  
(2Tx/2Rx, 2x2 MIMO):**

- 18 cells @ 20MHz

**for 4 Antennas  
(4x2 MIMO 4Rx div, 4x4 MIMO):**

- 9 cells @ 20MHz

## Nokia AirScale System Module

### Multi RAT Sharing Dimensioning

Nokia AirScale System Module supports System Module sharing (SRAN) functionality -> Single BB card can be shared between **two RATs**.

#### 1) WCDMA – GSM card sharing case:

6 subunits available for WCDMA.  
GSM supports up to 24 TRXs  
with ¼ ABIA

4 subunits available for WCDMA.  
GSM supports up to 36 TRXs  
with ½ ABIA

#### 2) WCDMA – LTE card sharing case:

4 subunits for WCDMA.  
Remaining half ABIA for LTE  
allocation

Note that WCDMA LCG can have resources  
also in another BB cards e.g. :

Exemplary picture LTE and WCDMA LCG (12 subunits)

**SBTS 19 System Modules for supported configuration**

Fullrack AirScale

**NOKIA**

## Nokia AirScale System Module

SRAN cell sets allocation on full AirScale module

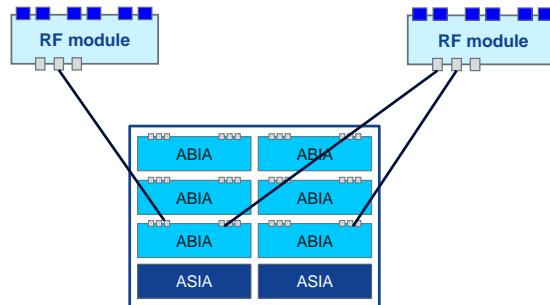

- Up to 6xABIA cards available for SRAN cell set allocation providing high capacity for sites.
- GSM ABIA has to be connected to primary Common Unit.
- One ASIA card will be the „primary” unit
- GSM can be allocated only on one ABIA in whole SBTS

## Nokia AirScale System Module

SRAN cell sets allocation on full AirScale module

- SBTS shall support multi-RAT RF connection to both half-subracks at the same time in dual core AirScale configuration.
- An RF is considered as **split** between two cores (or simply split) only if it has commissioned links to both cores.
- An RF is considered as **localized** if it has commissioned link(s) to only one core.

46

RA23500-V-19

© Nokia 2019

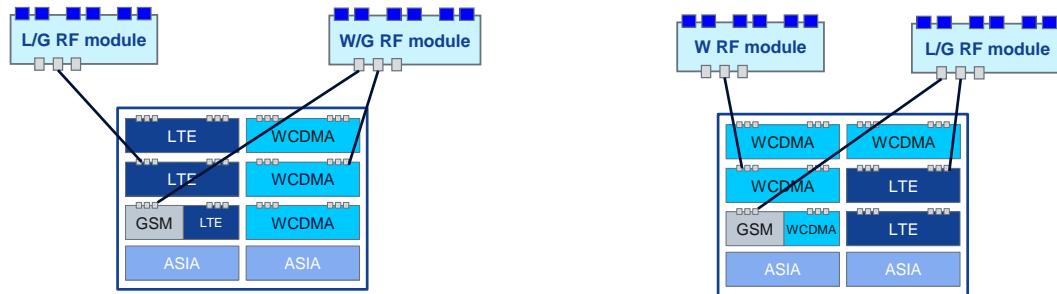

NOKIA

A localized RF can optionally have also un-commissioned link(s) to the other core, but these links will be ignored (they can serve as provision for future reconfiguration purposes, avoiding thus the need that the operator goes again on the site).

## Nokia AirScale System Module

SRAN cell sets allocation on full AirScale module

- LTE+GSM and WCDMA+GSM RFs can be split;
  - In case of a split RF configured with WCDMA+GSM, WCDMA will be allocated to secondary core.
  - In case of a split RF configured with LTE+GSM, LTE will be allocated to secondary core.
- Each optical link will be dedicated to one RAT (WCDMA or LTE or GSM)

47

RA23500-V-19

© Nokia 2019

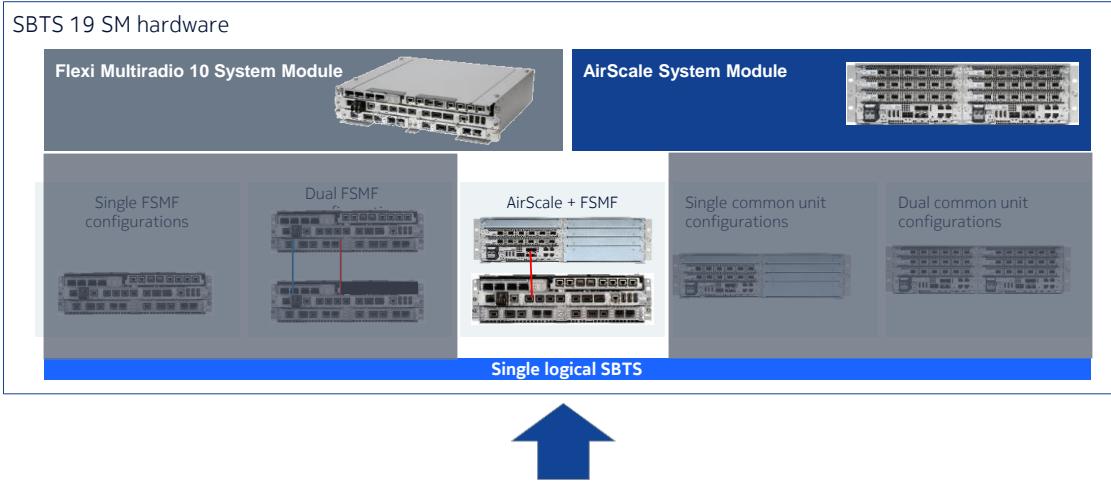

NOKIA

The mono-RAT, LTE+WCDMA and LTE+WCDMA+GSM RFs cannot be split, but can have un-commissioned link(s) to the other core.

The RFs configured in a chain cannot be split. The first RF of the chain can have un-commissioned link(s) to the other core.

## SBTS 19 System Modules for supported configuration

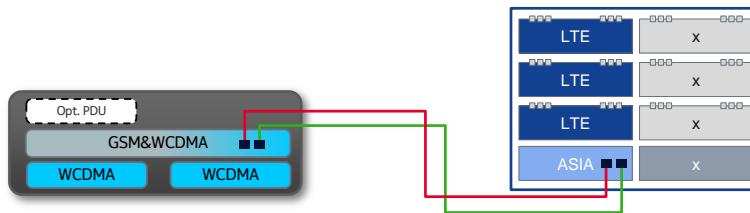

AirScale + FSMF

## Single logical SBTS on Airscale + FSMF (SR001307)

SR001307

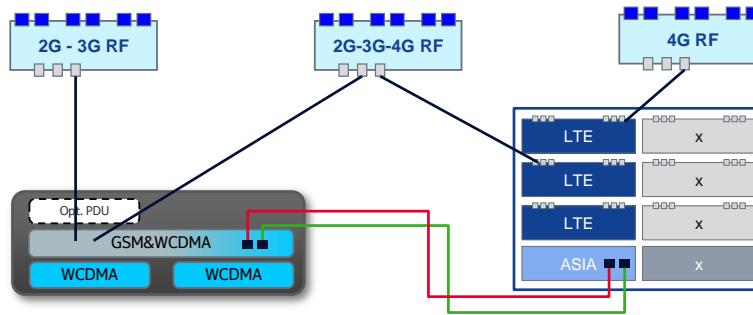

- The AirScale + FSMF works only between a single Airscale core and a single FSMF,
- Airscale is the master module, transport network is connected to it,
- LTE is processed on the Airscale,
- GSM and WCDMA are processed on the FSMF,
- Baseband allocation is done according to the existing rules,
- Modules are connected using the SRIO link
- HDMI cable has to be used to forward sync data from AS to FSMF

## Single logical SBTS on Airscale + FSMF (SR001307)

SR001307

- No IQ data routing between the modules
- All RMs serving GSM and/or WCDMA connected to FSFM/FBBx
- All RMs serving LTE connected to ABIA
- Shared RMs serving LTE-GSM, LTE-WCDMA or LTE-WCDMA-GSM have to be split between the SMs

## How to start?

The Excel file contains the information on how to start building the configurations.

**General guideline**

The SRAN configuration consists of two dependent steps: the baseband (BB) configuration and the radio (cell/sector - RF) configuration.

**SRAN BB cell set** - defines the supported baseband configuration. BB cell sets are independent, feasible configurations for SBTS. BB cell set depicts the capacity of the HW used per technology and the RF ports used to connect received RF units (defined in RF cell sets sheet) for each RAT. There are separate BB cell sets for FFSMF and AirScale System Modules. SRAN and LTE cell sets can be combined together to provide the full required SBTS configuration. BB cell set describes how particular RATs can be allocated to BB resources provided by a particular hardware.

**SRAN RF cell set** - defines the maximum available radio capacity for one specific RAT (GSM, WCDMA, or LTE) or a combination of RATs (LTE+GSM, LTE+WCDMA, WCDMA+GSM, or LTE+WCDMA+GSM). RF cell set is described by the supported RATs, the supported RF units, the RF unit type (for example, 2Tx2Rx or 3TxRx), number of optical cables and their minimum speed, number of sectors and cells possible for a particular RAT depending on the type of antenna configuration (number of T/Rs and Rxs) and in case of LTE, LTE-WCDMA, LTE-GSM or LTE-WCDMA-GSM, and also the LTE cell bandwidth.

LTE cell sets are fixed to a particular BB and RF configuration and can be added on top of SRAN cell set configuration.

**Note:** For RF units tab where units are tagged with **LTE feature partly alignment up to FDD-LTE 17SP** on AirScale, all pure LTE configurations on these RF units are specified in LTE configurations documents and thus no LTE RF cell sets are added for use in SRAN BB cell sets.

**Note:** When building the configuration, take in consideration the **Important notes** tab.

**SRAN and LTE cell sets can be combined. LTE and SRAN cell sets compatibility level.**

**Tabs:** Front page, Changes, Introduction, Conf building Instructions, RF units, Sector configuration types, AS BB Cell sets, Single FFSMF BB Cell sets, RF Cell sets

Trainer note: open the document an, different tabs, etc, show the structure

## How to start?

### RF Units sheet

It holds the information about supported RF types and their properties

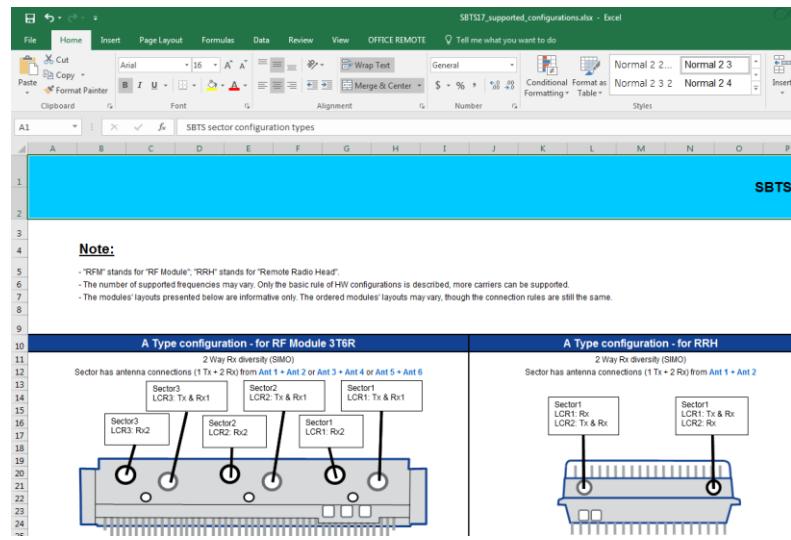

RF units												
Band	3GPP band number	RFM / RRH	Unit	Power	SBTS MSR mode	LTE Dual carrier support	RF type	Sales item code	Optical connectivity	GSM dedicated mode	WCDMA dedicated mode	
4	450	31	RRH	FRAA	2x40W	no	no	2TxRx	473220A	OB94_6	no	no
5	700	28	RFM	FRPA	6x40W	no	no	6TxRx	472703A	OB94_6	no	no
6	700	28	RFM	FRPB	6x40W	no	no	6TxRx	472752A	OB94_6	no	no
7	730	12/17	RRH	FRLB	2x20W	no	yes	2TxRx	472180A	OB94_3	no	no
8	800	20	RFM	FRMC	6x40W	no	no	6TxRx	472655A	OB94_6	no	no
9	800	20	RFM	FRME	6x40W	no	no	6TxRx	472927A	OB94_6	no	no
10	800	20	RFM	FRMF	6x80W	no	no	6TxRx	472930A	OB94_6	no	no
11	850	5/6/19/20/27	RFM	FXCA	3x80W	yes	yes	3TxRx	472142A	OB94_3	yes	yes
12	850	5/6/19	RFM	FXCB	3x80W	yes	no	3TxRx	472678A	OB94_6	yes	yes

Trainer note: show how to filter different types of RF,

## How to start?

### Sector configurations

This sheet presents the different types of sector configurations and the deployment of cells/carriers on the antenna lines

Trainer note: explain the basic types (H,I,A,C,M,N), use whiteboard/PC tablet to draw example sites, explain here the concept of RF Sharing, power allocation

## How to start?

Connectivity

FSMF +  
FBBC

### 5 RF ports (or 6 RF ports)

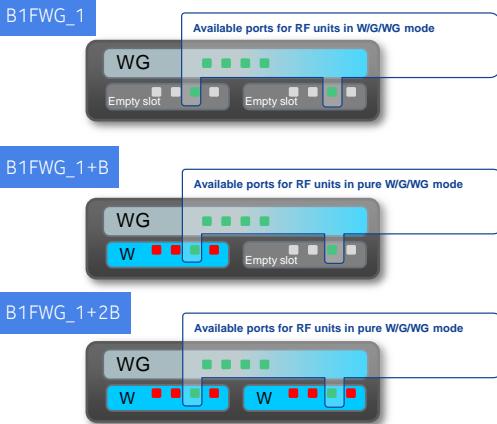

- for one or more RF sets
- single RF set may support WCDMA or GSM or WCDMA&GSM (RF sharing) carriers

6 RF ports are available if second FBBA/C is installed for connectivity purposes

## F-SMF SRAN BB cell sets - Examples

### WCDMA + GSM

24TRX or 36TRX:

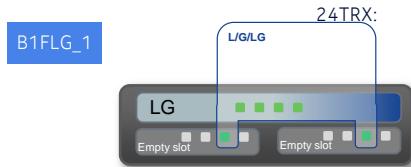

#### BB capacity for WCDMA + GSM:

- Up to 24TRX / 1/3 F-SMF core + 3,5 SU for F-SMF
- Up to 36TRX / ½ F-SMF core + 2,5 SU for F-SMF
- Additional WCDMA extensions of 1 or 1 FBBA/C
- GSM always allocated to F-SMF core
- Up to 6 RF ports can be used for RF unit connectivity
  - depends on neighbor cell set port usage
- Available ports for RF units in pure GSM, WCDMA and WCDMA+GSM RF shared mode – please check supported RF sets for the details

## FSMF S-RAN BB cell sets - Examples

### LTE + GSM

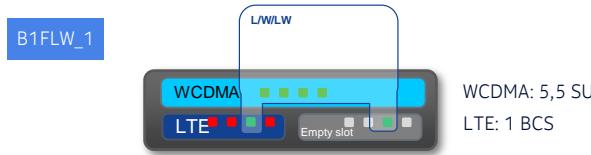

#### BB capacity for LTE + GSM:

- Up to 24TRX / 1/3 FSMF core
- GSM always allocated to FMSMF core
- LTE: reduced cell set
- Up to 6 RF ports can be used for RF unit connectivity
  - depends on neighbor cell set port usage
- Available ports for RF units in LTE, GSM or LTE+GSM mode – please check supported RF sets for the details

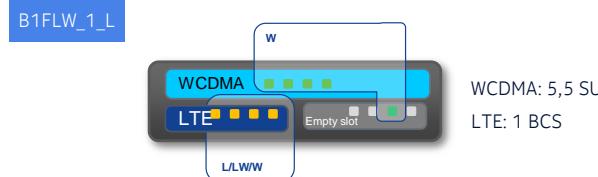

## FSMF SRAN BB cell sets - Examples

LTE + WCDMA

### BB capacity for LTE + WCDMA:

- WCDMA: 5,5 SU on FMSF core
- Additional WCDMA extension of 1 FBBA/C possible in empty slot
- LTE: basic cell sets
- Up to 6 RF ports can be used for RF unit connectivity
  - depends on neighborcell set port usage
- Available ports for RF units in pure WCDMA, LTE or LTE-WCDMA RF shared mode (according to picture) – please check supported RF sets for the details

### BB capacity for LTE + WCDMA:

- WCDMA: 5,5 SU on FMSF core
- Additional WCDMA extension of 1 FBBA/C possible in empty slot
- LTE: basic cell sets
- Up to 9 RF ports can be used for RF unit connectivity
  - depends on neighborcell set port usage
- Available ports for RF units in pure WCDMA, LTE or LTE-WCDMA RF shared mode (according to picture) – please check supported RF sets for the details

## FSMF S-RAN BB cell sets - Examples

### LTE + WCDMA + GSM

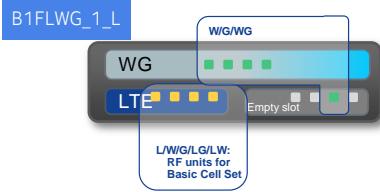

24TRX or 36TRX:

#### **BB capacity for LTE+ WCDMA + GSM:**

- Up to 24TRX / 1/3 FSMF core + 3,5 SU for FSMF
- Up to 36TRX/ ½ FSMF core + 2,5 SU for FSMF
- Additional WCDMA extensions of 1 or 1 FBBA/C
- GSM always allocated to FSMF core
- LTE: Basic cell set
- Up to 6 RF ports can be used for RF unit connectivity
  - depends on neighbor cell set port usage
- Available ports for RF units in L/WG and WG/LG/LW/LWG RF shared mode – please check supported RF sets for the details

24TRX or 36TRX:

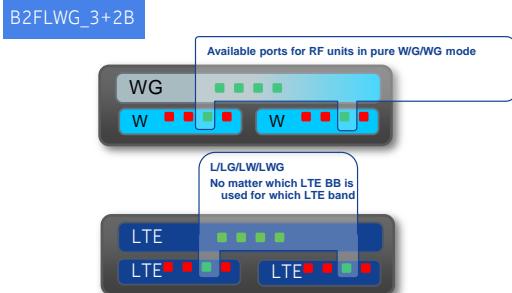

#### **BB capacity for LTE+ WCDMA + GSM:**

- Up to 24TRX / 1/3 FSMF core + 3,5 SU for FSMF
- Up to 36TRX/ ½ FSMF core + 2,5 SU for FSMF
- Additional WCDMA extensions of 1 or 1 FBBA/C
- GSM always allocated to FSMF core
- LTE: Basic cell set
- Up to 9 RF ports can be used for RF unit connectivity
  - depends on neighbor cell set port usage
- Available ports for RF units in L/WG and WG/LG/LW RF shared mode – please check supported RF sets for the details

## FSMF S-RAN BB cell sets

2xFSMF example: WCDMA + GSM + LTE

24TRX or 36TRX:

### BB capacity for LTE+ WCDMA + GSM:

#### 1st FSMF:

- Up to 24TRX / 1/3 FSMF core + 3.5 SU for 1st FSMF
- Up to 36TRX / ½ FSMF core + 2.5 SU for 1st FSMF
- Additional WCDMA extensions of 1 or 2 FBBA/C
- GSM always allocated to 1st FSMF core
- Available ports in 1st SM for RF units in pure GSM, WCDMA and WCDMA+GSM RF shared mode – please check supported RF sets for the details

#### 2nd FSMF:

- LTE B1: basic cell set
- LTE B2: basic cell set
- LTE B3: basic cell set
- Available ports in 2nd SM for RF units in pure LTE or LTE+WCDMA, LTE+GSM, LTE+WCDMA+GSM RF shared mode – please check supported RF sets for the details

# SRAN 18A new features

73

RA23500-V-19

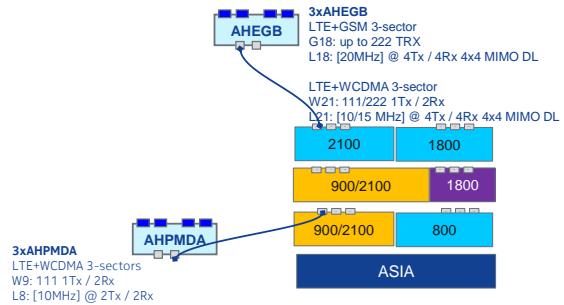

© Nokia 2019

NOKIA

## Support for configuration with WCDMA radio units connected to 2 ABIs (SR002075)

WCDMA related RF units connected to two ABIs

- This feature introduced functionality that allows **WCDMA** related RF units connectivity to **two ABIs** (12 ports in total) within one half subrack
- The feature will be compatible with **PIC** only if **WCDMA** RF units are connected to **two ABIs** AND at least one **ABIA** with **WCDMA RF** connectivity is non **WCDMA BB** related (**LTE** and / or **GSM BB** allocated only)

With **SR002075** Operator using **SBTS** will be able to use up to **12** fiber ports for **WCDMA** radio connectivity within one AirScale half sub-rack

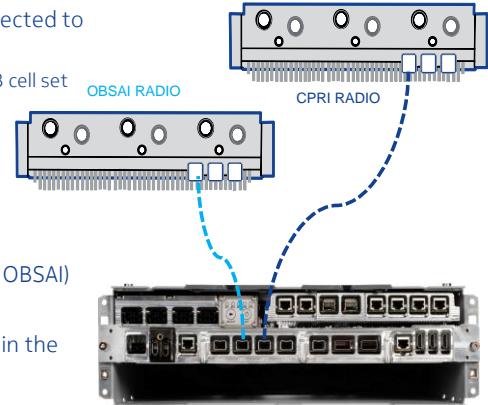

**[click\_1]** This feature introduced functionality that allows **WCDMA** related **RF** units connectivity to **two ABIs**, twelve ports in total, within one half subrack

**[click\_2]** This feature will be compatible with Parallel Interference Cancellation only if **WCDMA RF** units are connected to **two ABIs** and at least one **ABIA** with **WCDMA RF** connectivity is non **WCDMA** baseband related i.e., **LTE** and / or **GSM Baseband** allocated only

## SBTS support for mixed OBSAI/CPRI step 2 (SR002128)

Support for mixed OBSAI/CPRI radios on the same logical SBTS

- Radios with OBSAI and NOKIA CPRI protocols can be connected to same ABIA or FSMF/FBBx
  - Mixing of two protocols to be supported for LTE within same BB cell set
  - Mixing of OBSAI and CPRI to be supported for WCDMA RAT
- Radios in chaining with OBSAI and CPRI can be connected to same ABIA or FSMF/FBBx
- GSM sector should be mapped to same protocol (CPRI or OBSAI)
- Radios with ALU CPRI mixed protocols are not supported in the same ABIA/FBBx
- Radio chaining with mixed protocols is not supported

\* Illustrative purposes only

75

RA23500-V-19

© Nokia 2019

NOKIA

This feature **SR002128** brings in the support to use both **OBSAI** and **CPRI** radios in standalone and chaining for **WCDMA** RAT in **SBTS**. This builds on the functionalities of **SR001341**.

**[click\_1]** Radios with **OBSAI** and **NOKIA CPRI** protocols can be connected to same **ABIA** or **FSMF** or **FBBx**.

- Mixing of two protocols to be supported for **LTE** within same Baseband cell set
- Mixing of **OBSAI** and **CPRI** to be supported for **WCDMA** RAT

**[click\_2]** Radios in chaining with **OBSAI** and **CPRI** can be connected to same **ABIA** or **FSMF** or **FBBx**

**[click\_3]** **GSM** sector should be mapped to same protocol **CPRI** or **OBSAI**. **GSM TRX's** on **OBSAI** and **CPRI RF's** has to be allocated on different **DSP** in the System module

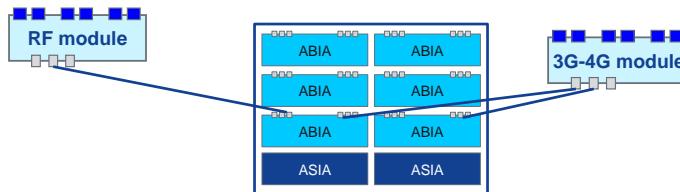

**[click\_4]** Radios with **ALU CPRI** mixed protocols are not supported in the same **ABIA** or **FBBx**.

**[click\_5]** Radio chaining with mixed protocols is not supported.

## SR002074 LWG RF split with AirScale Full Rack configuration

Support of RF split for RF units in LW, LWG mode with AirScale full rack configuration

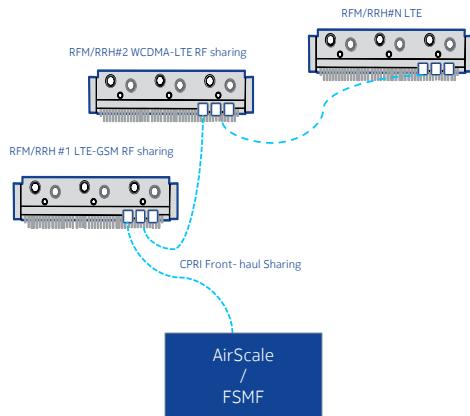

- It is possible to use **RF split** for RF units in **LW** and **LWG** mode with AirScale dual core configurations
- The mono-RAT RF units for **WCDMA** and **LTE** can be split
- The RFs configured with **GSM** must have the commissioned link(s) to the **primary core**
- **LTE & WCDMA** cells from particular RF can be allocated on both cores using **smodDN** commissioning parameter
- The RFs configured in a chain cannot be split

## SR001099 SBTS Nokia CPRI Chaining and Sharing

Chaining and RF Sharing support for CPRI Radios

- Chaining of AirScale CPRI capable Radios
- Up to 4.9Gbps support for FSMF and Up to 9.8 Gbps chaining support for AirScale
- MSR Support in Radio and front-haul sharing
- Possible to connect Single or Dual band RRH in chain
- Support for same or different CPRI line rates between hops

**SR001099** provides support for shared and chained Radios with Nokia **CPRI**. It is possible to share and chain the Nokia **CPRI** Radios with **FSMF** and AirScale.

**[click\_1]** Only **CPRI-CPRI** link chaining is introduced with this feature. Scope is only Nokia **CPRI** chaining. Chaining of **OBSAI** Radios to **CPRI** Radios is not supported

**[click\_2]** When used with **FSMF**, the maximum **CPRI** line rate possible is **4.9** Giga bits per second

**[click\_3]** The feature support **CPRI** chaining in **MSR** Mode.

**[click\_4]** Single band or dual-band **RRH/RFM** can be connected in one chain

**[click\_5]** In one chain with "n" hops there can be the same or different **CPRI** line bit rates in each hop

NOKIA

**SR001768 SBTS support for MSR Mode for AirScale RRH 2T4R B1 120W AHGA**

AHGA is a 2T4R RRH optimized for distributed macro BTS installations.

It supports 3GPP FDD band 1 with up to 60W per pipe.

- AHGA frequency supported for FDD:
  - Band 1: UL (RX) 1920 MHz - 1980 MHz, DL (TX) 2110 MHz - 2170 MHz
- AHGA supported modulation:
  - Support of modulation schemes up to QAM256 (DL)
  - Support of modulation schemes up to QAM64 (UL)
- Supported radio technologies by RF HW: FDD LTE, WCDMA and FDD LTE + WCDMA with the combinations according 3GPP Capability set CS3.
- In LTE operation following carrier bandwidths are supported: 5 MHz, A 10 MHz, 15 MHz, 20 MHz and NB-IoT in stand alone, in-band and guard band modes.

## SR002273 SBTS support for MSR mode for AirScale RFM 6T6R B1 480W ARGA

## Interfaces

Interface	Label	Number of interfaces	Connector type
Power Supply In	DC IN	1	3-pole Screw terminal for 25 mm <sup>2</sup> shielded cable
Grounding (GND Screws)	GND		2 x M5
LMI (Local Management Interface and EAC)	EAC	4 EAC input signals, 1 EAC output signal	MDR26
System Interface	OPT1, OPT2, OPT3	3	SFP + 9.8GBPS CIPRI
Antenna connectors	ANT	6 RF	4.3-10
RET connector	RET	1	AISG C485

## SR002152 SBTS support for MSR mode for AirScale RFM 6T6R B5 480W ARCA HW requierments and specification

- ARCA AirScale RFM 6T6R B1 480W
- TX power accuracy < +/- 0.8 dB, +/- 0.5 dB in limited temperature range (-10 ... 40°C)
- Enhanced sensitivity of LTE ~-106.5 dBm (0.2 ... 0.4 dB lower typical Noise Figure in Radio)
- EVM < 3.5% with 256 QAM, TX power level @60W (no back offs)
- Fan cooling
- AISG3.0 Antenna tilt support (RET), Antenna Line Device (ALD) auto detection with integrated bias-T's, RET support with an external connector (RS485 based AISG interface)

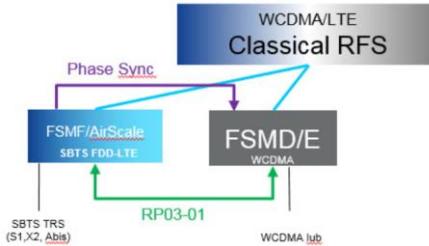

**SR001291 SBTS LTE - WCDMA (FSME/D) classical RF sharing**

- Solution Area: Classical RF Sharing
  - This feature introduces classical RF-sharing between Single RAN BTS (based on FSMF or AirScale), running FDD-LTE, and legacy WCDMA BTS, based on FSM Rel. 2 (FSMD/E).
  - The major use case behind this feature is to offer the possibility to modernize existing sites, having already deployed WCDMA BTS (FSM Rel.2, FSMD/E), by introducing SBTS (FSMF or AirScale), serving FDD-LTE (and GSM).
  - Feature helps to protect installed base of WCDMA FSM Rel. 2 by offering attractive site upgrade paths towards Multiradio deployment.

**SR001291 SBTS LTE - WCDMA (FSME/D) classical RF sharing**

- SBTS can be used together with legacy WCDMA BTS for classical WCDMA/LTE RF-sharing.
- LTE/GSM RF-sharing or GSM-only or another WCDMA-layer are supported inside SBTS as well.
- Only one WCDMA system module can be operated with one SBTS instance
- From network management point of view legacy WCDMA BTS is still operated as own, logical BTS (NetAct, EM).

## SR001291 SBTS LTE - WCDMA (FSME/D) classical RF sharing

- Classical RF-sharing requires RF-sharing Master and Slave roles.
- SBTS will take the role as RF-sharing Slave and WCDMA BTS will remain RF-sharing Master.
- Phase synchronization is provided from SBTS to WCDMA BTS via sync\_out – sync\_in port (Sync Hub Direct Forward), in case of SBTS, acting as the Sync (Hub) master, WCDMA BTS the Sync (Hub) Slave.
- \*If WCDMA BTS is Sync master, no need to use SHDF (phase synchronization via RP3-link is sufficient) \* see interdependencies

### Interdependencies between the features:

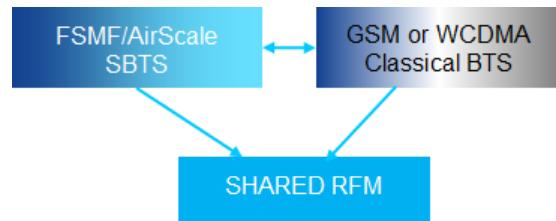

- Legacy classical LTE-WCDMA RFS and Sync Hub Forwarding features as a precondition.
- Dependency with SR002175 “Classical RF-sharing between SBTS and WCDMA BTS with WCDMA extension module support” planned for SRAN19

**SR001291 SBTS LTE - WCDMA (FSME/D) classical RF sharing**

- Only legacy LTE cell set, running on SBTS, as defined as of today (no support for Single RAN cell set)
- All existing classical WCDMA/LTE RF-sharing configurations, based on LTE FSMF with single WCDMA FSM Rel. 2, shall be supported.

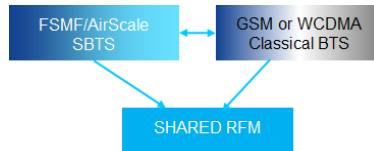

SR002251 SBTS (LTE only mode) support for classical RF sharing with legacy BTS (WCDMA or GSM)

This feature introduces classical RF-sharing between Single RAN BTS (FSMF or AirScale), running on LTE FDD only mode with legacy WCDMA and GSM BTS

**SR002251 SBTS (LTE only mode) support for classical RF sharing with legacy BTS (WCDMA or GSM)**

- Synchronization between SBTS to legacy BTS is handled via RP3 or SHDF.
- One free optical port is needed at SBTS and WCDMA or GSM BTS for Inter-System Module connection (RP03-01).
- Configuration and synchronization rules defined for classical RF Sharing shall be applicable for this feature.
- SBTS LTE will assume the role of RF-sharing slave, WCDMA BTS remains RF-sharing master.
- SBTS LTE will assume the role of RF-sharing Master, GSM BTS remains RF-sharing Slave.

# SRAN 19 dimensioning example

**Scenario 1: 2 RAT site (WCDMA-LTE)  
with FSMF baseband**

## Scenario 1

Finding the RF cell sets (1/4)

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
WCDMA/LTE	900	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	2xRFM 3T6R
WCDMA/LTE	2100	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	1xRFM 6T6R

Find RF module type in the Excel file for the first RF cell set

Band	3GPP band number	RFM / RRH	Unit	Power	SBTS MSR mode	LTE Dual carrier support	RF type
900	8	RFM	FXDB	3x80W	yes	yes	3Tx/6Rx

## Scenario 1

Finding the RF cell sets (2/4)

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
WCDMA/LTE	900	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	2xRFM 3T6R
WCDMA/LTE	2100	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	1xRFM 6T6R

Select the proper RF cell set

RF set ID	RF mode	No. of RF units	Supported RF units	RF type	OBSAI minimum SFP speed mode	OBSAI #fibers /RF unit	LTE configuration (Cell-sector)	Number of LTE configuration Tx/Rx	Antenna configuration type	LTE Bandwidth (max of 1,4, 3, 5,10,15,20)	WCDMA configuration (cell-sector)	Tx/Rx	Antenna configuration type
2LW3	LW	2	FXCB,FXD,B,FXFC,FX3Tx/6Rx,JB,FXJC	6	2	1+1+1	2Tx/2Rx	H	20	2+2+2	1Tx	C	

## Scenario 1

Finding the RF cell sets (3/4)

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
WCDMA/LTE	900	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	2xRFM 3T6R
WCDMA/LTE	2100	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	1xRFM 6T6R

Find RF module type in the Excel file for the second RF cell set

Band	3GPP band number	RFM / RRH	Unit	Power	SBTS MSR mode	LTE Dual carrier support	RF type
2100	1	RFM	FRGU	6x60W	yes	no	6Tx/6Rx

## Scenario 1

Finding the RF cell sets (4/4)

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
WCDMA/LTE	900	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	2xRFM 3T6R
WCDMA/LTE	2100	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	1xRFM 6T6R

Select the proper RF cell set

RF set ID	RF mode	No. of RF units	Supported RF units	RF type	OBSAI minimum SFP speed	OBSAI #fibers	LTE configuration	Number of LTE configurations	Antenna configuration type	LTE Bandwidth (max of 1,4, 3, 5,10,15,20)	WCDMA configuration (cell-sector)	Tx/Rx	Antenna configuration type
1LW6	LW	1	FRGU	6Tx/6Rx	6	1	1+1+1	2Tx/2Rx	I	10	1+1+1	1Tx	A

## Scenario 1

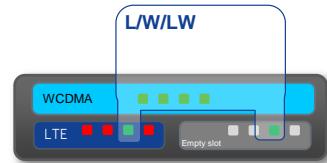

Find the BB cell set

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
WCDMA/LTE	900	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	2xRFM 3T6R
WCDMA/LTE	2100	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	1xRFM 6T6R

Required BB capacity:

LTE: 1 BCS

WCDMA ~6 SU

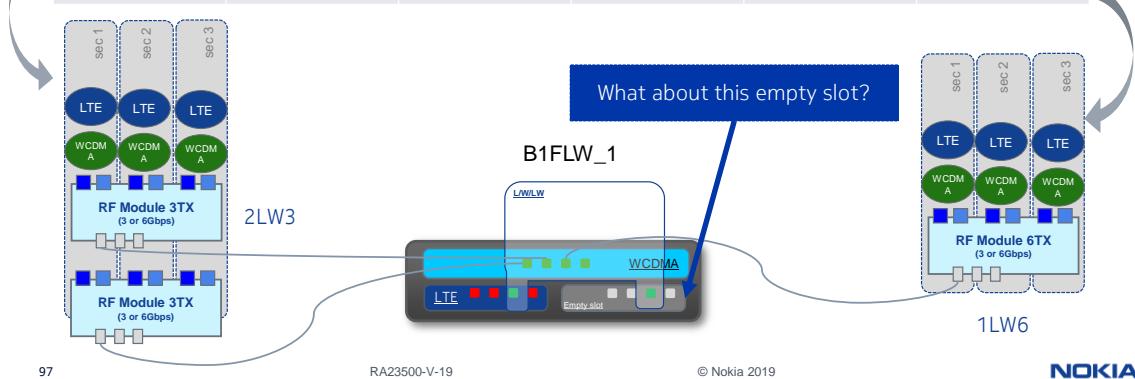

BB cell set selection

BB_cell_set_ID	No. of RATs	SBTS SM mode	No. of SMs	SM1 BB deployment			LTE BB			WCDMA BB	GSM BB
				FSMF1	FBBA/C	FBBA/C	#RCS	#BCS	#ECS	#SU	#TRXs
B1FLW_1	2	LW	1	WCDMA	LTE	Empty		1		5.5	

## Scenario 1: 2 RAT site (WCDMA-LTE) with FSMF baseband

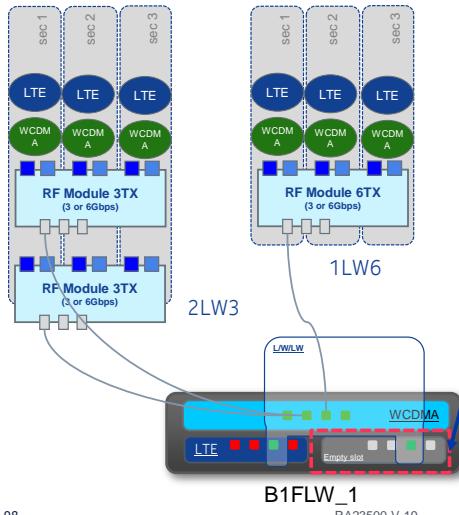

Complete configuration

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
WCDMA/LTE	900	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	2xRFM 3T6R
WCDMA/LTE	2100	1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 2T2R	1xRFM 6T6R

## Scenario 1

### Expanding site configuration (1/2)

The empty slot can be used. LTE and SRAN cell sets can be flexibly combined to build target configuration. So in the empty slot we can „insert“ a SRAN BB cell set or a pure LTE cell set.

#### 1. Adding a SRAN cell set:

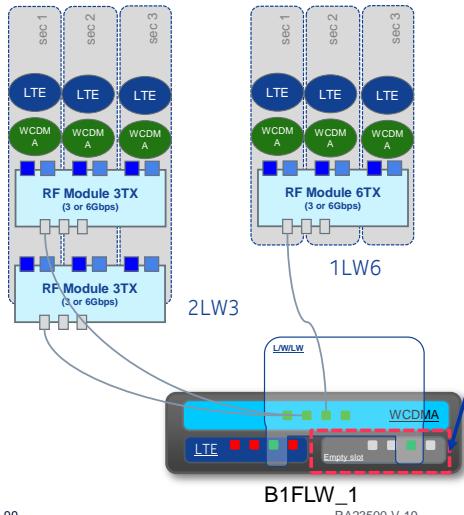

- Limited options, only one FBBx card slot free.
- A good fit might be a situation where we use the FBBx card for additional WCDMA capacity. Then we could expand the number of cells per sector in the 1LW6 RF cell set

#### 2. Adding a LTE cell set

- One FBBx card can support a Basic Cell Set for LTE
- The LTE CuDo can give us an exact definition

## Scenario 1

Expanding site configuration (2/2)

99

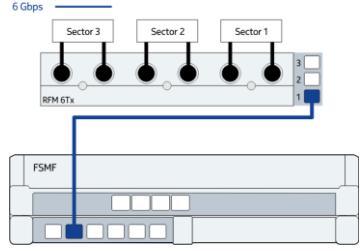

RA23500-V-19

### Example solution

Excerpt from LTE CuDo:

**2TX2RX up to three sectors, 1.4, 3, 5 or 10 MHz, centralized I-type RFMs 6Tx, 1746\_1b1**

basic cell set works on FSMF or **any** FBBC

NOKIA

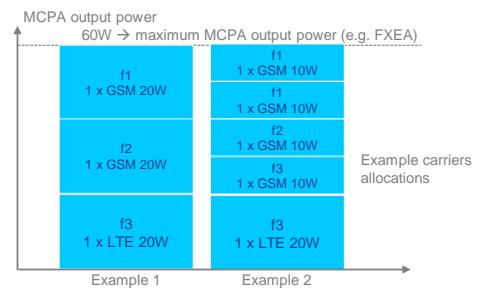

Trainer note: talk about the RP3 link speeds, show the calculator in Excel file

## Output power levels

- Output power levels:
  - Radio Modules are equipped with a single Multi Carrier Power Amplifier (MCPA) per RF pipe
  - The MCPA amplifies simultaneously all the carriers defined within the RF bandwidth of the pipe
  - The maximum output power at the antenna connector depends on Radio Module variant
  - The maximum output power of the MCPA is shared among defined carriers that is why the maximum output power per carrier should be aligned with the number of carriers to be handled by given MCPA

Example Power Levels in 3-RAT RFS			
RF variant	GSM	WCDMA	LTE
60W RFM	10, 12, 15, 20, 30, 40	8, 10, 15, 20, 30, 40	8, 20, 40
80W RFM	10, 12, 15, 20, 30, 40, 60	8, 10, 15, 20, 30, 40, 60	8, 20, 40, 60

Note1: sum of power assigned to carriers must stay within MCPA limit  
 Note2: power back off restrictions may reduce the maximum MCPA output power, depending on the carrier combinations

# SRAN 19 dimesioning example

Scenario 2: 3 RAT site (GSM-WCDMA-LTE) with FSMF baseband

## Scenario 2

Finding the RF cell sets (1/4)

:

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
GSM/WCDMA/LTE	900	4+4+4/1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 1T2R / 2T2R	2xRFM 3T6R
GSM/LTE	1800	2+2+2/1+1+1	LTE BW: 20 MHz	1T2R / 2T2R	2xRFM 3T6R

Find RF module type in the Excel file for the first RF cell set

Band	3GPP band number	RFM / RRH	Unit	Power	SBTS MSR mode	LTE Dual carrier support	RF type
900	8	RFM	FXDB	3x80W	yes	yes	3Tx/6Rx

## Scenario 2

Finding the RF cell sets (2/4)

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
GSM/WCDMA/LTE	900	4+4+4/1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 1T2R / 2T2R	2xRFM 3T6R
GSM/LTE	1800	2+2+2/1+1+1	LTE BW: 20 MHz	1T2R / 2T2R	2xRFM 3T6R

Select the proper RF cell set

2LWG3

LTE configuration (Cell-sector)	Number of LTE configuration Tx/Rx	Antenna configuration type	LTE Bandwidth (max of 1,4,3,5,10,15,20)	WCDMA configuration (cell-sector)	Tx/Rx	Antenna configuration type	GSM configuration (maximum cell-sector)	Number Tx/Rx	Antenna configuration type
1+1+1	2Tx/2Rx	H	5	1+1+1	1Tx	C	4+4+4	1Tx/2Rx	C

## Scenario 2

Finding the RF cell sets (3/4)

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
GSM/WCDMA/LTE	900	4+4+4/1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 1T2R / 2T2R	2xRFM 3T6R
GSM/LTE	1800	2+2+2/1+1+1	LTE BW: 20 MHz	1T2R / 2T2R	2xRFM 3T6R

Find RF module type in the Excel file for the second RF cell set

Band	3GPP band number	RFM / RRH	Unit	Power	SBTS MSR mode	LTE Dual carrier support	RF type	GSM dedicated mode	WCDMA dedicated mode	LTE dedicated mode
1800	3/9	RFM	FXEB	3x80W	yes	no	3Tx/6Rx	yes	no	yes

## Scenario 2

Finding the RF cell sets (4/4)

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
GSM/WCDMA/LTE	900	4+4+4/1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 1T2R / 2T2R	2xRFM 3T6R
GSM/LTE	1800	2+2+2/1+1+1	LTE BW: 20 MHz	1T2R / 2T2R	2xRFM 3T6R

Select the proper RF cell set

2LG3

LTE configuration (Cell-sector)	Number of LTE configuration Tx/Rx	Antenna configuration type	LTE Bandwidth (max of 1.4, 3, 5, 10, 15, 20)	WCDMA configuration (cell-sector)	Tx/Rx	Antenna configuration type	GSM configuration (maximum cell-sector)	Number Tx/Rx	Antenna configuration type
1+1+1	2Tx/2Rx	H	20				4+4+4	1Tx/2Rx	C

## Scenario 2

Finding the BB cell set

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
GSM/WCDMA/LTE	900	4+4+4/1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 1T2R / 2T2R	2xRFM 3T6R
GSM/LTE	1800	2+2+2/1+1+1	LTE BW: 20 MHz	1T2R / 2T2R	2xRFM 3T6R

Required BB capacity:

LTE: 1 RCS, 1 BCS

WCDMA: ~3 SU

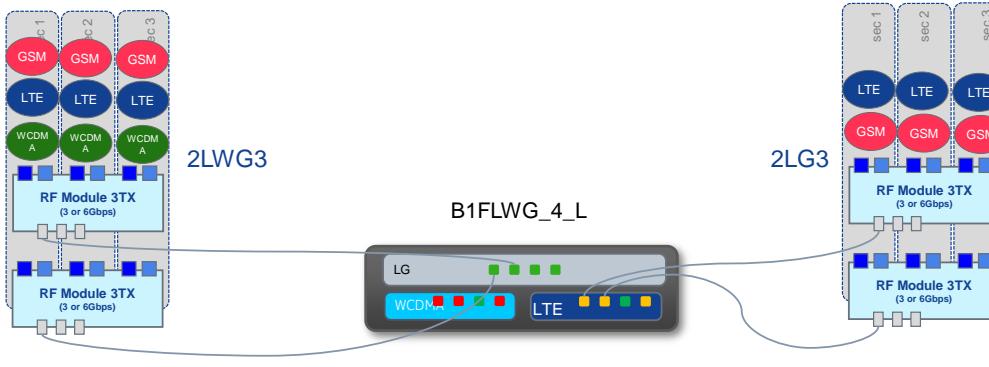

BB_cell_set_ID	No. of RATs	SBTS SM mode	No. of SMs	SM1 BB deployment			LTE BB			WCDMA BB	GSM BB
				FSMF1	FBBA/C	FBBA/C	#RCS	#BCS	#ECS	#SU	#TRXs

LTE	800	1+1+1	LTE BW: 10 MHz	2T2R	3xRRH 2x2T2R
LTE	700	1+1+1	LTE BW: 10 MHz	2T2R	3xRRH 2x2T2R

RF set ID	RF mode	RF set	No. of RF units	Supported RF units	Band	CPRI usage	RF type
1LWG2	LWG	1LWG2_5.1_2_1xCPRI9.8Gbps_GBB	1	AHPMDA	8	0,30	2x2Tx/2Rx
1L2	LTE	1L2_5.1_2_1xCPRI9.8Gbps_G	1	AHPMDA	20	0,25	2x2Tx/2Rx
1L2	LTE	1L2_5.1_2_1xCPRI9.8Gbps_G	1	AHPMDA	28	0,25	2x2Tx/2Rx

Check the CPRI link capacity requirements, the sum for all the RF sets in one RRH/RM should be below 1 (one CPRI link). If its more then additional cable is needed

Note: the CPRI link usage values in the Excel can refer to different LTE BW size, for detailed results use the CPRI link calculator in the Excel file.

Trainer note: show in the excels the details of each RF set

## Configuration building example 2

### AirScale Configuration building

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
GSM/WCDMA/LTE	900	2+2+2/1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 1T2R / 2T2R	3xRRH 2x2T2R
LTE	800	1+1+1	LTE BW: 10 MHz	2T2R	3xRRH 2x2T2R
LTE	700	1+1+1	LTE BW: 10 MHz	2T2R	3xRRH 2x2T2R
WCDMA/LTE	2100	2+2+2/1+1+1	LTE BW: 20 MHz	1T2R/2T2R	3xRRH 2T2R
LTE	1800	2+2+2/1+1+1	LTE BW: 20 MHz	1T2R / 4T4R	3xRRH 2T2R
LTE	2600	1+1+1	LTE BW: 20 MHz	4T4R	3xRRH 4T4R

This RF configuration utilises the new Nokia AHEGB dual band RRH

## Configuration building example 2

### AirScale Configuration building

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
GSM/WCDMA/LTE	900	2+2+2/1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 1T2R / 2T2R	3xRRH 2x2T2R
LTE	800	1+1+1	LTE BW: 10 MHz	2T2R	3xRRH 2x2T2R
LTE	700	1+1+1	LTE BW: 10 MHz	2T2R	3xRRH 2x2T2R
WCDMA/LTE	2100	2+2+2/1+1+1	LTE BW: 20 MHz	1T2R/4T4R	3xRRH 4T4R

## Configuration building example 2

Detailed sector configuration

Note: To make the picture clearer the numbering order of antenna ports on AHPMDA has been changed.

## Configuration building example 2

Final site config

## EXERCISE

Trainer gives an example site configuration for which the participants have to find the BB and RF cell sets.

Example exercise:

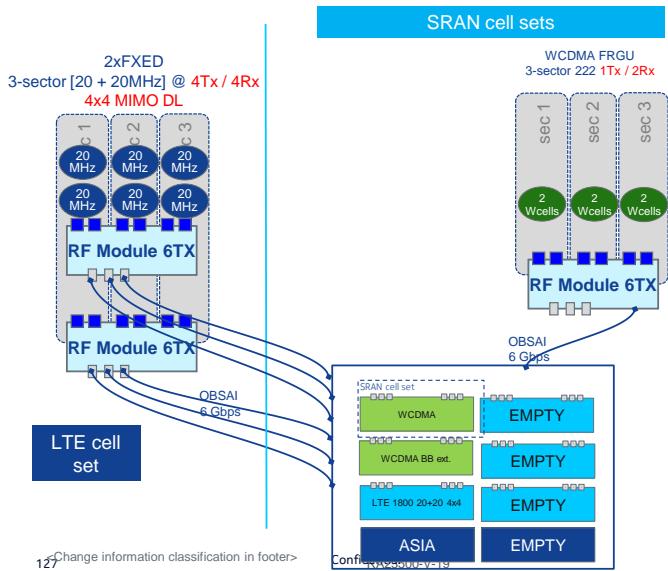

RAT	Band	Sector configuration	Sector capacity details	MIMO mode	RF type
WCDMA/LTE	2100	2+2+2/1+1+1	LTE BW: 5 MHz	1T2R/2T2R	1xRFM 6T6R
LTE	2600	1+1+1	LTE BW: 20 MHz	4T4R	3xRRH 4T4R
LTE	700	1+1+1	LTE BW: 5 MHz	2T2R	3xRRH 2x2T2R
LTE	800	1+1+1	LTE BW: 5 MHz	2T2R	
GSM/WCDMA/LTE	900	2+2+2/1+1+1/1+1+1	LTE BW: 5 MHz	1T2R / 1T2R / 2T2R
