StandByPluggger

I was annoyed at how many threads R running on this standby screen modification.

I packed the stndby.py with icon in2 sis.....

These are the options 2 turn on or off:

- 1) Shortcut
- 2) Search
- 3) Organizer
- 4) ToDo
- 5) Media player
- 6) Aioperatorplugin
- 7) Wlan
- Cool Share
- 9) Radio
- 10)Printintent

So make sure of this:

- 1 - turn off active standby (settings)
- 2 - copy from z:\resource AIPluginDefinition.rsc to c:\resource
- 3 - Set caps off (with latest firmware hack; sec.man or rompatcher)
- 4 - change the layout, save and set active stand on!
- 5 - Exit app with long menu press, choose it from the grid and close with c button

You just have to remember to disable active standby before you save the file and enable it afterwards.
It is python based (get those programs as well) so needs 2 be in c:

It only works on hacked phones...

B4 posting a question go 2 user CP (top left corner).
Edit your profile and details so we can see what kind of phone U use and on wich firmware it is running.
Saves me time.....

..... U can't push a river
